## HW2

Below are the steps taken to create database “asanj19\_university”:-

- 1) Firstly, I logged into my PostgreSQL database management system (DBMS).
- 2) Used command CREATE DATABASE (“asanj19\_university”), to create a new Database.
- 3) I, then, connected to asanj19\_university Database.
- 4) Used DDL commands from db textbook website to create 10 relations in asanj19\_university database.
- 5) Then, used SQL code from db textbook to import values into these 10 relations.
- 6) To error check, used command SELECT count(\*) from tablename; to cross reference table sizes.
